Profile

Passionate Computer Science student with hands-on experience in Unity 2D game development and interactive software projects. Skilled in gameplay mechanics, problem solving, and creative digital experiences using Unity and C#.

Education

University of Management and Technology , B.Sc. in Computer Science Currently pursuing a Bachelor's degree in Computer Science with a focus on Game Development.	10/2023 – 11/2027
Fatima Jinnah College , Intermediate in Computer Science (ICS)	09/2021 – 09/2023
Govt G/H School Nabi Park Ravi Road Lahore , Matric in Science	04/2019 – 10/2021

Skills

Languages: C++, C, C#, HTML, CSS, Python

Databases & Backend: MySQL, XAMPP

Tools & Platforms: VS Code, GitHub, LaTeX (Overleaf), Itch.io

Game Development: Unity 2D, Gameplay Mechanics, Collision Detection, UI Systems

Design Software: Canva, CorelDRAW, Adobe Photoshop, Blender

MS Office: Word, Excel, PowerPoint

Soft Skills

Team Management, Creative Problem Solving, Time Management, Adaptability

Technical Projects

Student Performance Hub

- Developed a web-based academic result management system.
- Automated grading, tracking, and report generation.
- Improved academic record management and workflow efficiency.

Multi Level Marketing System

- Developed an MLM system for managing products and participants.
- Implemented commission tracking and transaction management in C++.
- Used graph data structures for relationship handling.

Hotel Management System

- Built a hotel management system for room bookings and guest records.
- Supported reservations, cancellations, and revenue tracking.

Arduino Obstacle Avoiding Car

- Built an Arduino-based robot car with automatic obstacle detection.
- Used ultrasonic sensors for real-time obstacle avoidance.
- Demonstrated embedded systems and sensor integration.

Unity Game Projects

Tile Rush

10/2025

A modern Unity-based WebGL puzzle game where players stack, rotate, and drop tiles to complete lines and score high. Designed with smooth controls and a clean interface, offering a fast-paced and engaging browser experience.

[Play online on itch.io](#)

Feather Dash

10/2025

A fun and fast-paced 2D arcade game built in Unity. Players control a bird, flap through endless pipes, and aim for the highest score. Colliding with pipes or the ground ends the game instantly.

[Play online on itch.io](#)

Chrono Run

10/2025

A 2D endless runner game built in Unity (WebGL) where the player controls an injection dodging deadly viruses to survive longer and score higher. The game starts automatically, and upon collision, a restart button appears to let the player replay the game.

[Play online on itch.io](#)

Balloon Blast

09/2025

Fun balloon popping game where players score points by popping balloons. Missing a balloon resets the score and adds to the challenge.

Block Rain

08/2025

Fast-paced block-dodging game where players survive by avoiding falling blocks. One hit ends the game and resets the run.

Bounce Ball Smash

08/2025

Arcade game where players smash bouncing balls to score points. Increasing speed and movement make the game more challenging over time.

DS & Computer Vision Projects

Ecommerce Customer Purchase Prediction

Developed an end-to-end machine learning solution to predict customer purchasing behavior using Python, Scikit-Learn, and advanced classification models. Performed EDA, feature engineering, customer segmentation, model evaluation, and generated data-driven marketing insights to improve conversion rates.

Smart Whiteboard Document Scanner

Developed a computer vision-based document scanning application using OpenCV, ORB feature detection, BFMatcher, and RANSAC homography techniques. Implemented image alignment, feature matching, and image stitching to combine multiple overlapping images into a single high-resolution scanned document, improving document quality and readability.

Smart Attendance System Face Recognition

Developed an automated attendance management system using Python and OpenCV for real-time face detection and recognition. Implemented facial recognition algorithms to accurately identify students, record attendance automatically, and reduce manual tracking efforts while improving efficiency and accuracy in attendance management.

Diabetes Hospital Readmission Prediction

Conducted data preprocessing, feature engineering, EDA, and machine learning on 101,766 hospital records from the UCI Diabetes dataset. Built predictive models and evaluated performance using standard classification metrics and visualization techniques.

Certificates

- Game Development Hands-On Training Workshop (ICFCS 2025), UMT SST
- Research Smarter: Using Web of Science for Academic Success, Clarivate & HEC Pakistan
- Introduction to Modern AI, Cisco Networking Academy
- Foundations: Data, Data, Everywhere, Google (Coursera)
- Code Amplified: Building Software with Generative AI Workshop, ICFCS 2026, UMT SST
- Pitch Night Edition, Google Student Ambassador Program 2026
- Confidence and Communication Workshop, UMT OPS
- Talent Quest Fest 2.0 Typing Competition Participation, UMT SST
- Art of Negotiation: Network, Influence & Seal the Deal, UMT OPS
- Crash Course on Python, Google (Coursera)
- Kick-Start Your Freelancing Career Workshop, UMT OPS
- Agentic AI Workshop AI Chatbot Development & Freelancing, IEEE UMT
- Introduction to Data Science, Cisco Networking Academy
- Introduction to Cloud Computing, SkillUp by Simplilearn
- Prompt Engineering with ChatGPT, SkillUp by Simplilearn
- Networking Basics, Cisco Networking Academy
- Speak to Lead Communication & Leadership Workshop, Axiolink Systems
- English Immersion (SD-100), UMT Connected
- Tech Fiesta 2026, UMT Robotics & Automation Society
- AI Your Finals: Study Smarter with AI Prompts & UMT AI Tutor, UMT OPS
- The Future of Learning: Marketing & Communication in the Digital Age, UMT OPS
